

**TRUCKING | BROKERAGE | INTERMODAL | LOGISTICS | TECHNOLOGY SOLUTIONS**

Offices throughout North America

Decades of experience have taught the senior managers of Sunteck Transport Group, a wholly-owned subsidiary of AutoInfo, Inc. ("Sunteck"), that the most proficient business model in transportation management combines the control of equipment (motor carrier authority) with an experienced freight brokerage operation that allows a company to legally and efficiently provide the most cost-effective mode of transportation to its clients.

As an experienced logistics company with contract carrier and brokerage authority, Sunteck has the ability to continuously react to changing market conditions and evolving customer needs. Our experienced freight coordinators and logistics managers are armed with the flexibility and freedom to assess each of our customers' service and cost requirements and implement the optimum transportation solution for every shipment.

In addition to a stable of trucks, trailers and meticulously qualified company drivers, Sunteck has contracts with more than 24,000 motor carriers who own and control in excess of 300,000 pieces of rolling stock. This additional capacity is called upon during those times when the entire Sunteck fleet is committed to existing loads. Virtually limitless resources available to the Sunteck transportation team enable our seasoned freight experts to cover and manage any freight and/or logistics dilemma.

Sunteck Transport Group's portfolio of transportation services include Full Truckload Brokerage; Contract Carrier/Asset Management; Less than Truckload (LTL); Intermodal; Expedited; Government Services; and Third Party Logistics.

Sunteck exploits technology to achieve optimization, integration and visibility throughout the supply chain. We focus on a diverse range of market sectors including food, automotive, paper, printing, electronics, general industry and various other consumer goods and retail products.

We are a leader in the research, development and utilization of cutting-edge computer and inter-networking solutions. We recognize the importance and necessity of providing just-in-time (JIT) transportation and logistics' services to our customers. Our state-of-the-art, proprietary dispatch and tracking software is complimented by one of the industry's most proficient data storage and disaster recovery programs. We employ industry-leading technologies to provide on-line, real-time tracking and tracing information to assure that our customers are only a mouse click away from critical information they need about their shipments.

Sunteck supports the latest ANSI/ASC X-12 EDI standard versions as well as non-traditional proprietary formats to transmit and receive vital business documents. Sunteck utilizes value-added networks (VANS) and the Internet to effectively transport this data in both real time and batch environments. The use of EDI allows for the rapid and efficient exchange of unambiguous and durable business transactions. Sunteck's IT professionals work closely with our customers to determine and implement the most efficient method of EDI or web-based solutions.
